TROPICAL CYCLONE BULLETIN NR. 3F
Low Pressure Area (formerly "JOSIE")
Issued at 5:00 PM, 14 July 2026

JOSIE WEAKENED INTO A LOW PRESSURE AREA WHILE MOVING NORTH NORTHEASTWARD OVER PHILIPPINE SEA	
Location of Center (4:00 PM)	
The center of the Low Pressure Area (formerly “JOSIE”) was estimated based on all available data at 1,125 km East of Southeastern Luzon (14.5°N, 134.6°E) .	
Intensity	
Central pressure of 1008 hPa .	
Present Movement	
North northeastward Slowly	

TROPICAL CYCLONE WIND SIGNALS (TCWS) IN EFFECT
No Wind Signal is currently hoisted

OTHER HAZARDS AFFECTING LAND AREAS
Heavy Rainfall Outlook The Low Pressure Area (formerly "JOSIE") is less likely to directly affect the weather condition of the country for the next coming days. Severe Winds The Southwest Monsoon will bring strong to gale-force gusts over the following areas (especially in coastal and upland areas exposed to winds): Today: Ilocos Region, Cordillera Administrative Region, Cagayan Valley, and Central Luzon Tomorrow (15 July): Ilocos Region, Abra, Apayao, Zambales, Bataan, Batanes, and Babuyan Islands. Thursday (16 July): Ilocos Region, Abra, Apayao, Batanes, and Babuyan Islands.

TROPICAL CYCLONE BULLETIN NR. 3F

Low Pressure Area (formerly "JOSIE")

Issued at 5:00 PM, 14 July 2026

HAZARDS AFFECTING COASTAL WATERS

24-Hour Sea Condition Outlook

Up to rough seas over the following coastal waters:

- **Up to 3.0 m:** The western seaboard of Babuyan Islands; the northwestern seaboard of Ilocos Sur; the seaboard of Ilocos Norte.
- **Mariners of small seacrafts, including all types of motorbancas, are advised not to venture out to sea under these conditions, especially if inexperienced of operating ill-equipped vessels.**

Up to moderate to rough seas over the following coastal waters:

- **Up to 2.5 m:** The northwestern seaboard of Pangasinan; the northern and western seaboard of Batanes; the seaboard of La Union; the northern seaboard of Babuyan Islands; the remaining seaboard of Ilocos Sur.
- **Up to 2.0 m:** The remaining seaboard of Batanes; the western seaboard of Zambales, Bataan and Batangas; the northwestern seaboard of Occidental Mindoro including Lubang Islands; the northwestern seaboard of Calamian Islands and Kalayaan Islands; the remaining seaboard of Batanes
- **Mariners of motorbancas and similarly sized vessels are advised to take precautionary measures while venturing out to sea and, if possible, avoid navigation under these conditions.**

Other coastal waters have forecast wave heights of less than 2.0 m.

TRACK AND INTENSITY OUTLOOK

Due to unfavorable environmental conditions, JOSIE weakened into a low pressure area at 2:00 PM today. The remnant low will move generally north northeastward over the Philippine Sea. However, as the remnant low moves over increasingly less favorable conditions, there is a likelihood that it may dissipate over the Philippine Sea.

Considering these developments, the public and disaster risk reduction and management offices concerned are advised to take all necessary measures to protect life and property. Persons living in areas identified to be highly or very highly susceptible to these hazards are advised to follow evacuation and other instructions from local officials. **For heavy rainfall warnings, thunderstorm/rainfall advisories, and other severe weather information specific to your area, please monitor products issued by your local PAGASA Regional Services Division.**

Unless re-development occur, this is the final bulletin for this weather disturbance.
